PROFESSIONAL SUMMARY

Data Engineer with ~ 3 years of experience building scalable data pipelines and modernizing legacy systems using Python, PySpark, and SQL. Proven ability to optimize ETL/ELT workflows (70% performance improvement) and process large-scale data efficiently. Experienced in Databricks, Airflow, and Lakehouse architectures, with working knowledge of AWS (S3, Glue, Lambda) and Azure (ADLS2, ADF). Incoming OMSCS student at Georgia Tech (Fall 2026).

SKILLS

Languages	Python, SQL
Data Engineering	ETL/ELT, Data Modeling, Data Integration, Medallion Architecture
Big Data	Apache Spark, PySpark, Spark SQL
Cloud & Platforms	Databricks, Azure (ADLS, ADF), AWS(S3, Glue, Lambda), HX(Hyper exponential)
Orchestration	Apache Airflow, Databricks Workflows
Storage & Formats	Delta Lake, Parquet
Optimization	Z-Order, Liquid Clustering, Partitioning, Caching, Multi-threading
Databases	SQL Server, Oracle, PostgreSQL
Tools	Git, CI/CD, Postman
AI/ML	Generative AI, LLMs, LangChain, Pinecone

PROFESSIONAL EXPERIENCE

Deloitte	Bengaluru, Karnataka
Data Engineer (Industry - Insurance)	Apr 2026 - present

- Worked on a large-scale data migration project from PostgreSQL to HyperX using SQL Server, Azure Functions, and Azure Data Factory (ADF) pipelines.
- Developed complex stored procedures and integrated API-based data loading frameworks to efficiently ingest and transform data into HyperX.

Genpact (Internal LE Movement; Enquero -> Genpact)	Bengaluru, Karnataka
Data Engineer (Industry - Energy)	May 2024 - Apr 2026

- Modernized legacy ETL infrastructure by migrating 70+ Informatica mappings and PL/SQL functions to PySpark and Spark SQL, implementing a Medallion Architecture on Databricks that improved data accessibility and reduced architectural complexity by 30%.
- Engineered high-performance data pipelines using Airflow and Databricks Workflows, achieving a 70% increase in performance and slashing processing windows from 8 hours to 2 hours through multi-threading, caching, and optimized incremental loads.
- Optimized storage and compute efficiency by implementing Delta Lake features like Liquid Clustering and Z-Order, resolving critical ETL framework bugs to ensure production stability and 99% data integrity; recognized with Silver Cheer points for high-impact delivery.
- Developed complex Price Realization logic using PySpark and Spark SQL, including the design and implementation of a global stacking logic to consolidate and process 4 years of historical data for advanced analytics.

- Completed a rigorous 3-month Generative AI training program, culminating in a DocQA capstone project and gaining hands-on expertise in building LLM-powered applications and modern AI-driven applications.

Enquero Global

Bengaluru, Karnataka

Data Engineer (POC)

Aug 2023 - May 2024

- Engineered a one-time historic migration tool to transition 1TB of data from legacy databases to Databricks within 60 minutes, eliminating reliance on third-party tools and achieving a 40% reduction in migration costs.
- Developed cloud-independent Python and PySpark scripts to manage data staging and a high-velocity three-stage process: performing deep data analysis via inference/mapping, migrating data in single or batch loads, and conducting rigorous record-to-record or rule-based validation for ~ 90% data accuracy.
- Orchestrated end-to-end pipelines using Databricks Workflows to automate complex migration logic, leveraging multi-threading and optimizations like Z-Order and Liquid Clustering to boost processing performance by 35%, earning Bronze Cheer points for technical excellence.

Software Intern

Mar 2023 - Jul 2023

- Engineered a MERN stack insurance web application, leading a team of 10 as Scrum Master while personally owning user authentication, database modeling, and full-stack integration.
- Developed a production-grade frontend for an NGO using React, ensuring a high-quality user interface and streamlined deployment via CI/CD pipelines on GitHub.
- Completed advanced technical training in Generative AI, Cloud computing, and Databricks, specializing in modern data engineering workflows and scalable AI solutions.

EDUCATION

Nitte Meenakshi Institute of Technology

BE in Information Science and Engineering

Bengaluru

CGPA: 9.14/10

Georgia Institute of Technology

Incoming MS in Computer Science (OMSCS), Fall(2026)
